Professional Experience

09/2022 – present

Sibiu, Romania

Full Stack Developer, Thiele & Klose

As a Full Stack Web Developer, i was responsible for developing and maintaining a large-scale web application that delivered news for German users. My job primarily involved building new features, as well as fixing bugs to ensure the smooth operation of the application.

My daily duties involved coding and programming using various front-end and back-end technologies, including HTML, CSS, JavaScript, VueJs, Node.js, and GraphQL. I had to collaborate with other developers, designers, and stakeholders to ensure that the application was user-friendly, visually appealing, and functioned efficiently.

Acquired skills and knowledge:

VueJs, NodeJs, GraphQL, Solr, typescript, cypress, Jest, Vuex.

01/2022 – 09/2022

Sibiu, Romania

Full Stack Developer, Evo Primes / Plutus Inc

My role in this company is to develop features and fix different type of bugs for an online complex ecommerce type application.

Here i had the chance to work with one of the biggest ecommerce service, eBay, get on call with our clients and identify application's issues and get a grasp of this new domain related to rare valuable products.

Acquired skills and knowledge:

PHP, Laravel, docker, vuejs, ebayApi, bootstrapVue, eBay api.

09/2020 – 01/2022

Sibiu, Romania

Full Stack Developer, Graffino Web

While working at this company i had the chance to work on the following projects:

Had to upgrade a Laravel project from version 5.4 to 8.0 and add search engine optimization feature, This project was an internal one, which would represent a til (today i learned) part of a website.

Contributed to a tasks management application, similar to clickUp. While working here, i developed my skills on VueJs , the project started on early version of vueJs 3, but we had to downgrade due the fact that most of the open source libraries didn't upgrade at that point , and without it would slow the development process.

Another project i took part of, was a full solution for packet distribution across international warehouses. This app would be built from a mobile app, back-end API and a web application. My role was to create full features, starting from back-end up to the frontend, for example, implementation of authentication, registration process, creating back-end resources, starting from DB, migrations, models, Json API resources, authorization policies, tests etc.

Had the chance to lead a front-end application on VueJs which would manage German teenage firefighter volunteers. My role was to take manage and implement the front-end part of the project, which was written in VueJs 2. I had to take care of project architecture, libraries, tasks, estimates, communicate with back-end lead and communicate directly with clients and present demos each week.

I had to manage already implemented projects in Laravel & WordPress. My role was to implement different features, fix bugs, upgrade libraries every 2 weeks, deliver changes on staging & production servers. Here i had the chance to implement my devOps/ sysOps skills. I improved my skills while using Docker, Github Actions, nginx, server management.

Latest project i'm currently working on it's a web application which it will be used by factory workers in order to manage their job schedule. Whether they wish to change their work schedule, request an absence day, short work time changes in their work schedule (mostly for pandemic use) or enroll a new user. My role here is to create frontend pages & components fully functional, with api calls & dynamic views. Here i had the chance to improve my vue2 skills, work with element ui, get to work with a different type of project architecture which i was used to.

Acquired skills and knowledge:

PHP, MySQL, JavaScript, Wordpress, Laravel, mariadb, seo techniques, typescript, devops, cypress, git/github, docker, vuejs, Vuex, vuetify, SysOps, AntDesign, primevue, vuex reststate

03/2020 – 08/2020
Sibiu, Romania

Web Developer, EdelCode

While working for EdelCode company i had to chance to be introduced to web development.

On the backend side, i worked on a company management app, which would take care of every aspect needed to manage a single or multiple company / corporation. Here i learned to work with nestJs , typeORM, graphQL.

My role was to implement different features for the current project, for example, company assets, roles, employees vacation,

On the frontend side, i learned working with my first workframe, which was React Js. I had the chance to work on different features on an app that would allow random people from a city to meet and organize different sport events, like football matches, hiking, bicycle rides. Here i learned working with react & typescript and some RxJs.

Acquired skills and knowledge:

CSS, HTML., ReactJS, GraphQL, RxJS, NestJS, TypeORM

09/2018 – 03/2020
Sibiu, Romania

Android Developer, KeepCalling

While working for KeepCalling i had the chance to be introduced to the IT world.

My responsibilities were the following:

Implementation of new features for multiple android apps.

Improving performance of different apps.

Implementation of new design for multiple flavor apps.

Implementation of UI, integration and unit tests,

Integration of dependency injection library, called dagger.

Integration of rxJava on current projects.

Integration of data binding library called butterknife.

Keeping track of live state of android apps.

Keeping track of live statistics of our apps.

Full release process of different apps.

Acquired skills and knowledge:

Dagger, Java, XML, Android, OOP, unit tests, android studio, dependency injection, android development, pjsip, Firebase, RxJava
