

Task 3 – Build the TechBridge Internship Tasks Experience

Status **In progress** ▾

Timing Sep 8, 2026 to Sep 10, 2026

Owners Tech Bridge

Estimated time: 3–4 hours

Level: Beginner → Intermediate

Technologies: HTML5 + CSS3

Project Brief

TechBridge runs a **30-day internship program consisting of 8 practical tasks**.

A new intern visiting the TechBridge platform should be able to understand:

- What the internship involves
- What tasks they will complete
- When each task is introduced
- What each task is about
- Which tasks are available or upcoming

Your job is to design and develop an **Internship Tasks experience** that communicates this information clearly.

This should become another part of the TechBridge platform you started building in Tasks 1 and 2.

Do not copy a particular design. Use your own creativity to decide how the task experience should look and feel.

The Problem

Imagine you are a TechBridge intern.

You log into the website and want to know:

"What am I expected to complete during this internship?"

The page should make it easy for you to understand the entire internship journey.

A visitor should be able to quickly identify:

- The 8 tasks
 - When each task occurs
 - What each task involves
 - The progression from beginner to more advanced work
-

Official TechBridge Task Information

Use the following information as the foundation of your page.

Task 1

Build the TechBridge Homepage

Day: 1

Create the first version of the TechBridge website using HTML and CSS.

Task 2

Build the TechBridge Programs Experience

Day: 4

Create a Programs experience that presents TechBridge's available learning programs.

Task 3

Build the Internship Tasks Experience

Day: 8

Create an interface that presents the TechBridge internship tasks and helps users understand the internship journey.

Task 4

Build an Interactive Task Tracker

Day: 11

Use JavaScript to make the internship task experience interactive and allow progress to be tracked.

Task 5

Build the Intern Registration Experience

Day: 15

Create a professional registration/onboarding interface for TechBridge interns.

Task 6

Build the Task Submission System

Day: 19

Create an interface through which interns can prepare and submit their task work.

Task 7

Build the Intern Dashboard

Day: 22

Create a dashboard where an intern can view their profile, progress, tasks, and submissions.

Task 8

Build the Complete TechBridge Internship Platform

Day: 26

Combine the different components created during the internship into a complete TechBridge platform.

Your Challenge

Design a page or experience that presents the **8-task internship journey**.

You decide how visitors should explore the tasks.

For example, you could use:

- Cards
- Timeline
- Roadmap
- Vertical task list

- Grid
- Accordion
- Progress-style interface
- Another creative approach

There is **no required visual design**.

Required Features

1. Internship Introduction

Explain that TechBridge provides a structured **30-day practical internship**.

Your introduction should communicate that participants progressively develop their web development skills by completing practical projects.

2. Display All 8 Tasks

All eight tasks must be represented.

For each task, show enough information for the visitor to understand:

- Task number
- Task title
- Day
- Brief description

You may display additional information if it improves the experience.

3. Show the Internship Progression

The design should make the progression clear.

For example:

Day 1
↓
Day 4
↓
Day 8
↓
Day 11
↓
Day 15
↓
Day 19
↓
Day 22
↓
Day 26

You don't have to use this exact layout.

The important thing is that users can understand the sequence.

4. Difficulty Progression

The tasks should communicate that the internship becomes progressively more challenging.

You may represent this visually using labels such as:

- Beginner
- Beginner → Intermediate
- Intermediate
- Intermediate → Advanced Beginner

You can decide how to display these.

5. Task Details

When a visitor selects or views a task, they should be able to understand what they are expected to build.

You can provide the information directly on the page or use an interaction such as an expandable section.

JavaScript is not required for this task, so a simple card-based or section-based approach is perfectly acceptable.

Design Freedom

This is your opportunity to demonstrate your design thinking.

You decide:

- Layout
- Colors
- Typography
- Cards
- Icons
- Illustrations
- Spacing
- Animations
- Task status appearance
- Desktop/mobile presentation

Your design should remain consistent with the TechBridge website you created in Tasks 1 and 2.

Connect It to the Existing Website

Your Task 3 work should be connected to the website you have already created.

Visitors should be able to navigate between:

Home

Programs

Internship Tasks

Do not create an unrelated website.

Technical Requirements

For the required version, use:

- HTML5
- CSS3

You may use:

- Flexbox
- CSS Grid
- Media queries
- CSS animations
- CSS transitions

JavaScript

Not required.

If you already know JavaScript and want to add a small enhancement, you may, but your submission must still work without it.

Responsive Design

The task experience must work on:

- Desktop
- Tablet
- Mobile

If you use eight cards in a grid on the desktop, make sure the layout adapts appropriately to smaller screens.

Optional Challenge

Interns who want to go beyond the basic requirements may add:

- Expandable task descriptions
- Task filtering
- Interactive timeline
- Progress indicator
- Hover animations
- "View Task" buttons
- A mobile-friendly navigation menu

These are optional and should not replace the core requirements.

Testing

Before submitting, test:

Information

- Are all 8 tasks present?
- Are the task numbers correct?
- Are the days correct?
- Are descriptions accurate?

Navigation

Can users move between:

- Homepage
- Programs
- Internship Tasks

Responsive design

Test:

- Desktop
- Tablet
- Mobile

Usability

Ask yourself:

"If I were a new TechBridge intern, could I understand what I have to complete?"

If the answer is yes, your design is doing its job.

Submission

Submit:

1. GitHub Repository

Update the repository you've been using for Tasks 1 and 2.

2. Live Website

Provide the updated live website URL.

3. Screenshot

Submit at least one screenshot showing the Internship Tasks experience.

4. Developer Note

Write **3–5 sentences** explaining:

- How you chose to present the 8 tasks
 - Why you chose that layout
 - What you learned
 - Any challenge you encountered
-

Completion Checklist

- Created Internship Tasks page/experience
- Included all 8 tasks
- Included correct task titles
- Included correct days
- Included task descriptions
- Communicated the 30-day internship
- Communicated task progression
- Connected Task 3 to Tasks 1 and 2
- Added navigation
- Used HTML5
- Used CSS3
- Made the page responsive
- Tested desktop layout
- Tested mobile layout
- Tested navigation
- Updated GitHub
- Updated live website
- Submitted screenshot
- Submitted developer note
