

Task 4 — Build an Interactive Internship Task Tracker

Status **In progress** ▾

Timing Sep 11, 2026 to Sep 14, 2026

Owners Tech Bridge

Interactive Internship Roadmap — Two Tracks

Estimated time: 4–5 hours

Level: Beginner → Intermediate

Technologies: HTML5 + CSS3 + JavaScript

Project Brief

TechBridge offers practical internship opportunities in two tracks:

- **Data Analytics**
- **Web Development**

In Task 3, you created an Internship Tasks experience showing the Web Development internship journey.

Now TechBridge wants to make the experience more useful for people visiting the platform.

A visitor should be able to see **both internship tracks** and understand what they will be doing during the 30-day internship.

Your job is to build an **Interactive Internship Roadmap** using JavaScript.

The visitor should be able to switch between the **Data Analytics** and **Web Development** tracks without refreshing the page.

This task introduces JavaScript to the internship.

The Problem

Imagine someone discovers TechBridge and wants to apply.

They may ask:

"What will I actually be doing during the internship?"

They should be able to select a track and see its complete 8-task journey.

For example:

Choose Your Track

[Data Analytics] [Web Development]

If they select **Data Analytics**, the page displays the Data Analytics tasks.

If they select **Web Development**, the page displays the Web Development tasks.

Your Challenge

Build an interactive section of the TechBridge website that allows visitors to:

1. Choose an internship track.

2. View the 8 tasks for that track.
 3. See when each task is introduced.
 4. See what each task involves.
 5. See the difficulty progression.
 6. Switch between the two tracks without refreshing the page.
-

Official Data Analytics Track

Use the following information.

Task 1 – Data Cleaning Basics

Day: 1

Clean a messy dataset using Google Sheets or Excel. Identify and fix duplicate rows, blank cells, inconsistent formatting, and incorrect data types.

Difficulty: Beginner

Task 2 – Formulas & Pivot Tables

Day: 4

Use spreadsheet formulas and Pivot Tables to answer questions and extract useful insights from a dataset.

Difficulty: Beginner

Task 3 – Data Visualization

Day: 8

Create charts and a simple dashboard that communicate useful insights from a dataset.

Difficulty: Beginner → Intermediate

Task 4 – Introduction to SQL

Day: 11

Practice basic SQL queries and use them to answer real-world questions about data.

Difficulty: Beginner → Intermediate

Task 5 – SQL Joins & Aggregations

Day: 15

Use JOIN, GROUP BY and aggregate functions such as COUNT, SUM and AVG to analyze information across multiple tables.

Difficulty: Intermediate

Task 6 – Lookup Functions & Data Wrangling

Day: 19

Use VLOOKUP or XLOOKUP to combine related datasets and handle data mismatches.

Difficulty: Intermediate

Task 7 – Mini Analysis Project

Day: 22

Complete a small end-to-end analysis involving data cleaning, formulas, Pivot Tables, charts and recommendations.

Difficulty: Intermediate

Task 8 – Capstone Project

Day: 26

Complete a larger project combining spreadsheet analysis and SQL using at least two related tables.

Difficulty: Intermediate

Official Web Development Track

Use the following information.

Task 1 – Build the TechBridge Homepage

Day: 1

Create the first version of the TechBridge website using HTML and CSS.

Difficulty: Beginner

Task 2 – Build the TechBridge Programs Experience

Day: 4

Create a Programs experience presenting TechBridge's available learning programs.

Difficulty: Beginner

Task 3 – Build the Internship Tasks Experience

Day: 8

Create an interface that presents the TechBridge internship tasks and helps users understand the internship journey.

Difficulty: Beginner → Intermediate

Task 4 – Build an Interactive Internship Roadmap

Day: 11

Use JavaScript to allow visitors to switch between the Data Analytics and Web Development internship tracks.

Difficulty: Beginner → Intermediate

Task 5 – Build the Intern Registration Experience

Day: 15

Create a professional registration and onboarding interface for TechBridge interns.

Difficulty: Intermediate

Task 6 – Build the Task Submission System

Day: 19

Create an interface through which interns can prepare and submit their task work.

Difficulty: Intermediate

Task 7 – Build the Intern Dashboard

Day: 22

Create a dashboard where an intern can view their profile, progress, tasks and submissions.

Difficulty: Intermediate

Task 8 – Build the Complete TechBridge Internship Platform

Day: 26

Combine the different components created during the internship into a complete TechBridge platform.

Difficulty: Intermediate

Required Features

1. Track Selection

Create a way for visitors to select:

Data Analytics

or

Web Development

For example:

[DATA ANALYTICS] [WEB DEVELOPMENT]

The design is completely up to you.

2. Dynamic Track Switching

This is the **main JavaScript requirement**.

When the visitor selects Data Analytics:

Display the Data Analytics tasks.

When they select Web Development:

Display the Web Development tasks.

The page must change **without refreshing the browser**.

3. Display All 8 Tasks

For the selected track, display all 8 tasks.

Each task must show:

- Task number
 - Task title
 - Day
 - Description
 - Difficulty
-

4. Display the Selected Track

Make it obvious which track the visitor is currently viewing.

For example:

Currently Viewing

DATA ANALYTICS

or:

Currently Viewing

WEB DEVELOPMENT

5. Show the 30-Day Structure

The page should communicate that the internship is a:

30-Day Practical Internship

You should also make the task progression visible:

Day 1

Day 4

Day 8

Day 11

Day 15

Day 19

Day 22

Day 26

You can present this using your own design.

6. Show Difficulty Progression

Users should be able to understand that the internship becomes more challenging.

You can use labels such as:

Beginner

Beginner → Intermediate

Intermediate

You decide how these should appear.

JavaScript Requirements

This task is designed to introduce JavaScript fundamentals.

Your project should demonstrate the use of:

1. Variables

Use variables to manage information such as the currently selected track.

2. Arrays

Store the tasks for the internship tracks.

3. Objects

Represent individual task information.

4. Functions

Create functions for actions such as displaying a selected track.

5. Event Listeners

Detect when the visitor selects a track.

6. Conditional Logic

Determine which track's information should be displayed.

7. DOM Manipulation

Use JavaScript to change the content displayed on the webpage.

No Frameworks

For this task, use:

- HTML5
- CSS3
- JavaScript

Do **not** use:

- React
- Vue
- Angular

- Next.js

The purpose is to understand JavaScript fundamentals before moving to more advanced development.

Design Freedom

There is **no required visual design**.

You decide whether your roadmap uses:

- Cards
- Grid
- Timeline
- Tabs
- Roadmap
- Vertical list
- Another creative layout

You may also use:

- CSS animations
- CSS transitions
- Icons
- Hover effects

However, the design should remain consistent with the TechBridge website created in Tasks 1–3.

Continue From Previous Tasks

Do not create an unrelated website.

Continue working on the TechBridge project.

Your progression should now be:

Task 1

TechBridge Homepage

Task 2

TechBridge Programs

Task 3

Internship Tasks

Task 4

Interactive Two-Track Roadmap

Responsive Design

Your page must work on:

- Desktop
- Tablet
- Mobile

Make sure the track buttons and task information remain easy to use on smaller screens.

Testing

Before submitting, test the following.

Test 1 — Initial Page

- A track is displayed.
- The correct tasks appear.
- The selected track is clearly indicated.

Test 2 — Data Analytics

Click **Data Analytics**.

Confirm:

- All 8 tasks appear.
- Task numbers are correct.
- Days are correct.
- Titles are correct.
- Descriptions are correct.
- Difficulty levels are correct.

Test 3 — Web Development

Click **Web Development**.

Confirm:

- All 8 tasks appear.
- Task numbers are correct.
- Days are correct.
- Titles are correct.
- Descriptions are correct.
- Difficulty levels are correct.

Test 4 — Switching

Switch several times:

Data Analytics

Web Development

Data Analytics

Web Development

The information should change correctly **without refreshing the page**.

Test 5 — Navigation

Make sure users can still navigate between:

- Home
- Programs
- Internship Roadmap

Test 6 — Responsive Design

Test the website on:

- Desktop
- Tablet
- Mobile

Submission

Submit the following:

1. GitHub Repository

Update the same repository used for Tasks 1–3.

2. Live Website

Submit your updated live website URL.

3. Screenshots

Submit at least **two screenshots**:

- Data Analytics selected
- Web Development selected

4. Developer Note

Write **5–7 sentences** explaining:

- How you structured the two tracks.
 - How you used JavaScript to switch between them.
 - How you stored the task information.
 - Which JavaScript concepts you used.
 - One challenge you encountered.
 - How you solved it.
-

Completion Checklist

Content

- Data Analytics track included
- Web Development track included
- All 8 Data Analytics tasks included
- All 8 Web Development tasks included
- Correct task numbers
- Correct days
- Correct descriptions
- Difficulty levels included
- 30-day internship clearly communicated

JavaScript

- Track selection works
- Data Analytics displays correctly
- Web Development displays correctly

- Switching does not require a page refresh
- Variables used
- Arrays used
- Objects used
- Functions used
- Event listeners used
- Conditional logic used
- DOM manipulation used

Website

- Continued from Task 3
- Navigation works
- Responsive on desktop
- Responsive on mobile
- Consistent TechBridge design
- No major JavaScript errors

Submission

- GitHub updated
- Live website submitted
- Data Analytics screenshot submitted
- Web Development screenshot submitted
- Developer note submitted
